

Air bleed valves ABT

Functional Symbol

- The ABT valve enables air bleed from hydraulic circuits.
- The valve closes when circuit pressure exceeds 0.14 MPa.

Model Code

ABT-03-10-JA-(S4)-J

1 2 3 4

- 1 Air bleed valve
- 2 Size
- 3 Design no.
- 4 Special feature

Omit: Min. flow to close valve: 11 L/min
S4: Min. flow to close valve: 0.3 L/min

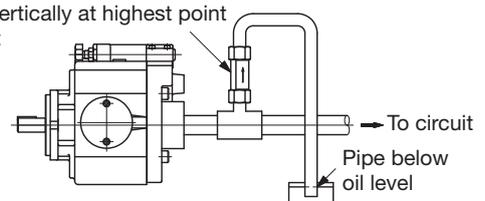

Specifications

Max. working pressure: 21 MPa
Weight: 0.2 kg

Notes on Operation

- Valve should be located at highest position in circuit and mounted vertically.
- Return line should be connected directly to tank and piped below oil level.
- As valve is not a no-leak valve, always incorporate a return line.

Mount vertically at highest point in circuit
