# azbil

#### **Cazbil** Please note our name change from Yamatake Corporation to **Azbil Corporation as of April 1, 2012** In consideration of the ervironment, and to avoid wasting paper, the old company name may appear on some documents.

## **Specification**

# Single Loop Controller SDC25/26

#### Features

The DigitroniK SDC25/26 is a digital indicating controller featuring multi-range inputs and PID control system using new algorithms "RationaLOOP" and "Just-FiTTER".

Up to two control output points (this number of points may vary depending on the model) can be used, which are selectable from the relay contact, voltage pulse, and current.

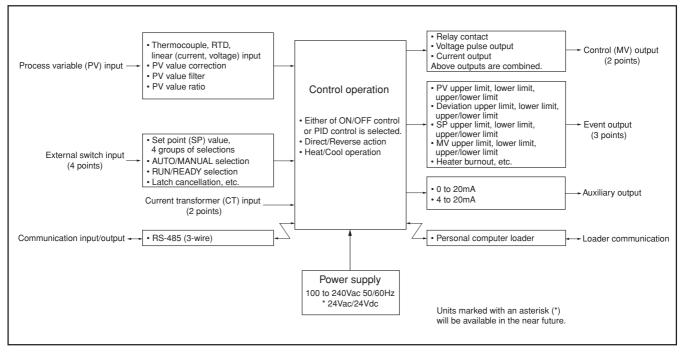

The smart loader package ensures easy setting operation and monitoring.

This controller is compliant to the IEC directives and the CE marking.

- Space saving design with a depth of 65mm. The mask of the front panel is also only 5mm thick.
- High accuracy of ±0.3%FS and sampling cycle of 0.3s (seconds).
- Multi-range inputs are available for selection, where the input type can be freely changed among thermo-couple, RTD, current, and voltage.
- The control method can be selected from any of the ON/ OFF control and PID control using "RationaLOOP" + "Just-FiTTER".

- The heat/cool control can be achieved using two control output points and event outputs.
- The PC loader port is provided as a standard function.
- The control output types available for selection are relay, voltage pulse, and current outputs. The heat /cool control can be achieved by interfacing with the 2nd control output in combination with these outputs.
- Event 3 points or 2 points (independent contact), CT input 2 points, DI 4 points, and RS-485 can be selected in combination.
- The smart loader package (SLP-C35) can be used.

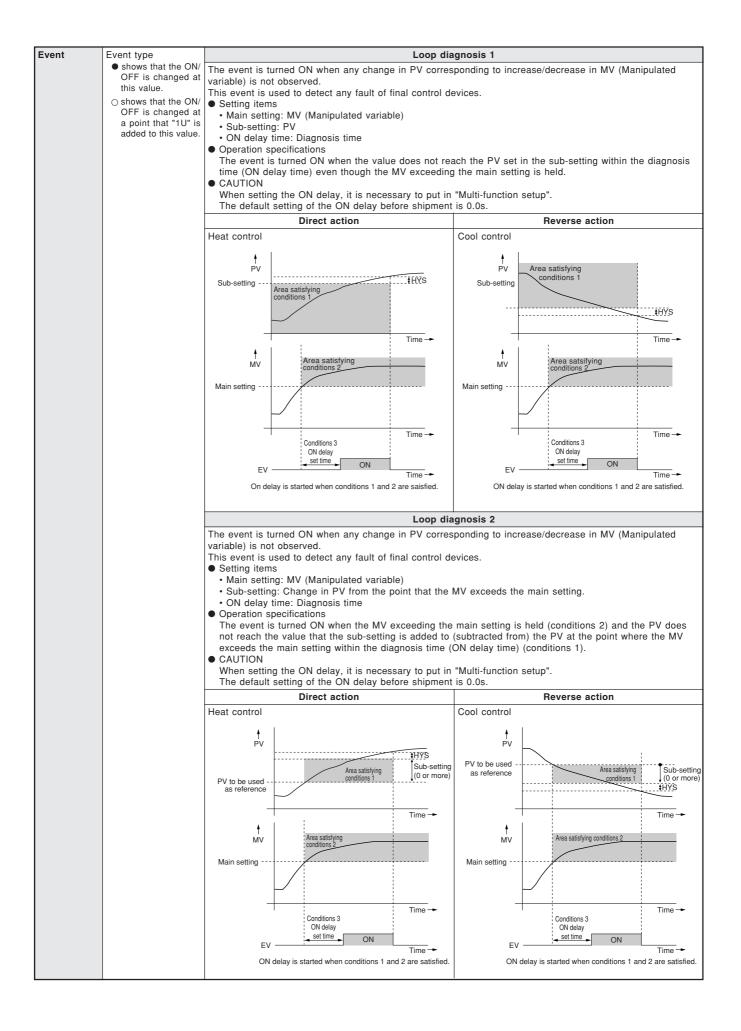

## Basic Function Block of SDC25/26

## Specifications

PV input	Input type	Multi-range of inputs - thermo	lauoo	e, RTD, DC current and DC voltage				
	Input sampling time	0.3s		-,, <u></u>				
	Input bias current	Thermocouple input:         0.2μA           RTD input:         1mA t           DC voltage input:         1V rat           0 to 5         10 to 5	ypical nge ol V, 1 t		(Note 1) RTD or A-wire burnout: Upscale + AL01 B-wire or C-wire burnout: Upscale + AL01, 03 More than 2-wire burnout: Upscale + AL01

	26	Golden iron chromel	0.0K to 360.0°K	0.0 to 360.0°K

#### **!** Handling Precautions

- The accuracy is  $\pm 0.3\%FS\pm 1$  digit, and  $\pm 0.6\%FS\pm 1$  digit for a negative area of the thermocouple.
- The accuracy varies according to the range. The accuracy of the No.17 (sensor type B) is ±4.0%FS for a range of 260°C or less, ±0.4%FS for 260 to 800°C. The accuracy of the No.23 (sensor type PR40-20) is ±2.5%FS for 0 to of 300°C, and ±1.5%FS for 300 to 800°C, ±0.5%FS for 800 to of 1900°C. The accuracy of the No.26 (sensor type golden iron chromel) is ±1.5K.
- For ranges with a decimal point, tenths are displayed on the line underneath point.

			U					Universal			
				Α				AC model (100 to 240Vac) 50/60Hz			
				D				DC model (24Vac/dc) (available soon)			
					1			Event relay output: 3 points			
					2			Event relay output: 3 points, Auxiliary ou	utput (current output)		
				(Note 1)	4			Event relay output: 2 points (independer	nt contact),		
				(Note 1)	5			Event relay output: 2 points (independer	nt contact), Auxiliary output (current output)		
						0		_			
					(Note 2)	1		Current transformer inputs: 2 points, Digital inputs: 4 points			
					(Note 2)	2		Current transformer inputs: 2 points, Digital inputs: 4 points, RS-485 Communication			
				00	No additional processing						
Note 1.	Note 1. Can not be selected for DC model.			D0	Inspection Certificate provided						
Note 2.	Current 1	transform	ner is so	ld separa	ately.		Y0	Complying with the traceability certification			

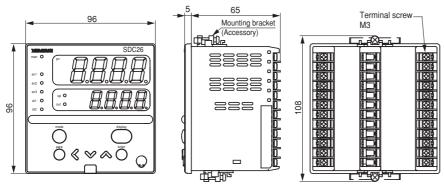

## I II III IV V VI VII VIII Example: C25TR0UA1000

#### Dimensions

#### • C25

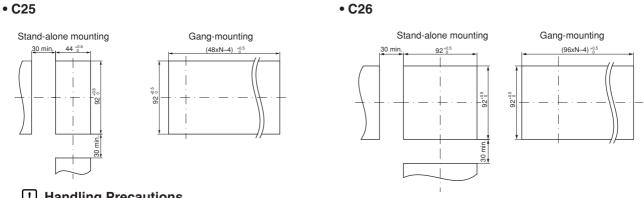

C26 

#### **!** Handling Precautions

To fasten this controller onto the panel, tighten a mounting bracket screws, and turn one more half turn when there is no play between the bracket and panel. Excessively tightening the screws may deform the controller case.

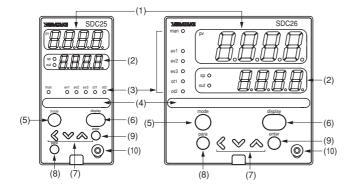

#### Panel cutout diagram

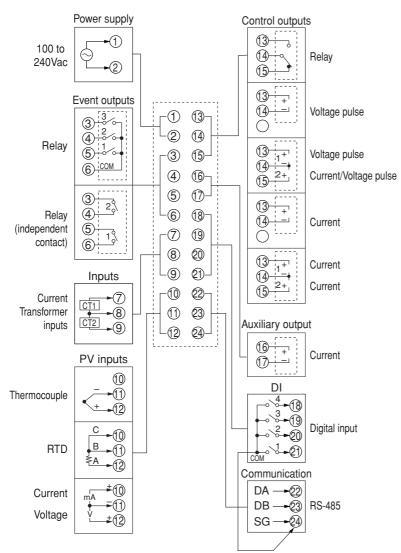

#### **!** Handling Precautions

- When three or more units are gang-mounted horizontally, the maximum allowable ambient temperature is 40°C.
- · For water-proof installation, install the attached gasket and then mount the device as a stand-alone device.

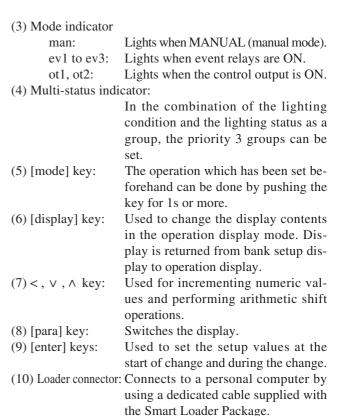

(Unit: mm)

- (1) Upper display: Displays PV values (present temperature, etc.) or setup items.
- (2) Lower display: Displays SP values (set temperature, etc.) and other parameter values. When the lower display shows the SP value, the "sp" lamp lights up. When the display shows the manipulated variable (MV), the "out" lamp lights up.

#### • Connection of C25/26

• Precautions on the use of self-tuning function The final control devices must be powered up simultonequely with on prior to the instrument when the

taneously with or prior to the instrument when the self-tuning function is to be used.

#### Precautions on wiring

#### 1. Isolation within instrument

Solid line portions " —— " are isolated. Dotted line portions " ---- " are not isolated.

Power supply		Control output 1
PV input		Control output 2
Current Transformer input 1		Auxiliary output
Current Transformer input 2		
Loader communication	Internal	
Digital input 1	Circuit	Event output 1 (Note 1)
Digital input 2		Event output 2 (Note 1)
Digital input 3		Event output 3
Digital input 4		
RS-485 Communication		

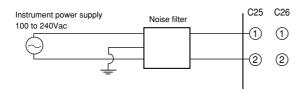

Availability of input and output is based on a model number.

Note 1 In case of independent contact, the part between the event output 1 and the event output 2 is isolated.

#### 2. Preventive measures against noise of instrument power supply

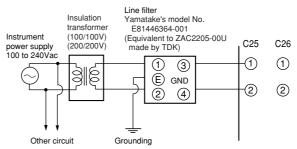

#### (1) Reduction of noise

Even though the noise is small, the noise filter is used to eliminate the effect of the noise as much as possible.

#### (2) When noise is excessive

If a large amount of noise exists, appropriate isolation transformer and line filter are used to eliminate the effect of the noise.

# 3. Installation environment noise sources and preventive measures

Generally, the following may be the noise sources in the installation environment:

Relay and contact, electromagnetic coil, solenoid valve, power supply line (particularly, 100Vac or more), motor commutator, phase angle control SCR, radio communication device, welding machine, high-voltage ignitor, etc.

#### Preventive measures against fast rise noise

Use of CR filter is effective to prevent fast rise noise. Recommended filter:

Yamatake's model No. **81446365-001** 

(Equivalent to 953M500333311 made by Matsuo Electric.)

#### 4. Wiring precautions

- (1) After taking the noise preventive measures, do not bundle the primary and secondary power cables together or put both power cables in the same conduit or duct.
- (2) Keep the input/output and communication lines 50 cm or more away from the power lines and power supply lines having a voltage of 100Vac or more. Additionally, do not put these lines together in the same conduit or duct.

#### 5. Inspection after wiring

After the wiring work has been completed, always inspect and check the wiring status. Great care should be taken since incorrect wiring may cause the instrument to malfunction or severe personal injury.

## 1 RESTRICTIONS ON USE

This product has been designed, developed and manufactured for general-purpose application in machinery and equipment. Accordingly, when used in the applications outlined below, special care should be taken to implement a fail-safe and/or redundant design concept as well as a periodic maintenance program.

• Safety devices for plant worker protection • Start/stop control devices for transportation and material handling machines

- Aeronautical/aerospace machines
- Control devices for nuclear reactors

Never use this product in applications where human safety may be put at risk.

Specifications are subject to change without notice.
